Provide Healthcare solutions according to requirement of clients

Projects

- **One O One Project** : In this project we automate the process through which manager can schedule the monthly/quarterly meetings with the individual team member and can give feedback or action items in this tool. Used: Angular 9, Typescript, Bootstrap 4.
- **Custom Modeler**: is a tool in which we prepopulate the inputs which we get from the SSO Team. Through this user can sign in directly using the single sign on functionality and can see the best options for their plan. We used Javascript, AngularJS for the functionality. This saves lot of time for the user for sign in into the tool. Used: Angular 8, Typescript.
- **Pre Enrollment Modeler** : This is automated process of showing Health Plan to the Employees of a company from which they can choose best plan for themselves. In this modeler we take some inputs in Angular form from user according to company requirements and based on inputs we show the different pricing plans from which they can choose the best options used AmCharts to show the plan in Chart. Used: Angular, AmCharts, Bootstrap4.

Junior Software Developer

Spine Software Systems Private Limited

Provide solutions related to products for parent company (Venus Remedies Limited)

Projects

- **Venus Remedies Limited Web Application**: Developed the Venus Remedies' Website (<https://career.venusremedies.com>) website to showcases the Products, Spotlight (Magazines, Newspapers) of the company. This website includes History, Awards and Global presence of the company. There is one Collaboration portal through which anyone can collaborate with the company in the desired field. Used AngularJS, Javascript, Bootstrap 4, AmCharts, wow.js, Java.
- **Career Portal**: In this project (<http://career.venusremedies.com>), we automated the process of hiring employees. I worked on admin section that includes job posting, candidate search, job responses according to the profile, status and vacancies. In homepage there is a dynamic counter for the number of jobs available according to the filters that is also developed in AngularJS controller. There is a Admin Panel for HR person they can post job, see job response from this. Used AngularJS, JavaScript, Bootstrap 4.
- **Enterprise Resource Planning**: A Java based project used to manage Employees data (Attendance, Leave, Salary) in an organization. The project is divided into three parts Master (one-time entry), Transaction (daily basis entry) and Reports (monthly and annually). HR can easily generate salary slip at end of every month with a full record of leaves of every employee with one click button. Used AngularJS, Javascript, Bootstrap 4, Jquery, AmCharts, Java, Spring, Hibernate.
- **Venus Pharma GMBH**: Developed the Website (<http://www.venuspharmagmbh.de>) to show the Business, Portfolio, Company's Global presence. In this i have used Javascript, Bootstrap 4, wow.js to show animations on scroll. Used Javascript, Bootstrap 4, wow.js.
